

# Moj Abubakr

Android Developer / London / [dev.moj@gmail.com](mailto:dev.moj@gmail.com) / [LinkedIn](#) / 2-3 years experience / Last Updated: 12th January 2015

---

## Skills

---

- Java/C++/**Android SDK, libraries and frameworks** /Android Studio/Gradle
  - **Git**/UI/UX/Animation/**continuous integration**/Trello
  - Adobe Photoshop/logo and asset creation
  - Adobe Premiere/film-making/photography
  - **Agile/TDD**/Practical experience of the **development lifecycle**; prototyping/wireframing to publishing/shipping.
  - Created **several C++ applications**; these include a simplified airline booking system, Morse code translator and a Sieve Of Eratosthenes to determine prime numbers within a given range. The report on these applications can be found [here](#).
  - Created a **GUI Java application** to display an Archimedean Spiral with user given variables.The report on this application can be found [here](#).
  - Created a **Java application** which simulates several CPU scheduling algorithms such as FCFS, SJF and Round-Robin. The report on this application can be found [here](#).
- 

## Projects

---

**Will It Rain?** - Find out when it will rain near you. Get information for every minute of the next hour, or every hour for the next 7 days; Powered by Dark Sky.

- Uses the [Smart Location Library](#) to streamline access to the Android location services API.
- Consumes **JSON** from the [forecast.io RESTful API](#) to display relevant data based on a given geographic coordinate.
- Built using the **Test Driven Development** methodology (TDD); tools used include **JUnit 4**, **Espresso** and **Mockito**.

**PAD - Public Anonymous Diary.** - The PAD is a social platform for everyone. Share your stories with the world and be part of the global stream. No logins to mess with, so it's easy to get started in seconds.

- Implements a complex [RecyclerView](#) to display user generated content with the inclusion of images, text and feedback buttons.
- Stores configuration and user data in the **cloud** using the **Parse** Backend as a Service (BaaS).
- Consumes several API's to enhance the application. These include [Giphy](#), [Microsoft Translator API](#) and [Random Famous Quotes](#).

**TIHK - Easy Buy. Easy Sell.** - The local buying and selling platform. Sell & buy locally - No login required!

- Implements real-time chat using the [Sinch](#) API to handle backend publishing/subscribing.
  - Features include image/camera capture, location services, sharing/liking content and geofenced results fetching.
  - This application formed the basis for my final year project at uni as well inaugurating as my introduction into Android development. Source code can be found [here](#).
- 

## Education

---

**London South Bank University** | [BEng Computer Systems & Networks Engineering](#) | 2013 to 2016

| Expected a 2:1 or higher.

**Lambeth College - Vauxhall** | [Level 3 Access to Higher Education - Electrical & Electronic Engineering](#) | 2012 to 2013

| Achieved 16 Distinctions (57 Level 3 Credits) within various Math and Electronic modules.
